## Laravel 8 - Convert PDF to Image Tutorial Example

• A universal language - Once the experiments are ready, they can be executed on any working framework like Linux, Macintosh, and so forth. What are the uses of Selenium in Python? PyTest is a popular testing framework that enables writing test codes using Python. QUESTIONS(PRACTICAL)-----QUESTION 1:-----  
 -Description: Create a new list with values and find the length of it Input : List = 10,20,30,90,10,10,40,50 QUESTION 2:-----Description: Create a new list with values and find the length of it Input : List = 105,205,305,405,505,605,705,805 QUESTION 3:-----Description: Create a new list with values and find the length of it Input : List = 'Java','Python','Selenium','Java',10,20,10 QUESTION 4:-----QUESTION 4.1:-----Description: Get the index value of 10 Input: List = 10,20,30,90,10,10,40,50 QUESTION 4.2:-----Description: Get the last index value of 10 Input: List = 10,20,30,90,10,10,40,50 QUESTION 4.3:-----Description: Get the index value of 50 Input: List = 10,20,30,90,10,10,40,50 QUESTION 4.4:-----Description: Get the index value of 90 Input: List = 10,20,30,90,10,10,40,50 QUESTION 4.5:-----Description: Get the each index value of 10 present in below list Input: List = 10,20,30,90,10,10,40,50,10 QUESTION 4.6:-----Description: Get the index value of 70 present in below list Input: List = 10,20,30,90,10,10,40,50,10 QUESTION 4.7:-----Description: Add a value [100,200,300] at the last position of list and find index value of 200 Input: List = 10,20,30,90,10,10,40,50,100,200,300 QUESTION 5:-----QUESTION 5.1:-----Description: Get the value present at 2nd index Input: List = 10,20,30,40,50,60 QUESTION 5.2:-----Description: Get the value present at 4th index Input: List = 100,200,300,400,500,600,700 QUESTION 5.3:-----Description: Get the value present at -2nd index Input: List = 105,205,305,405,505,605,705,805 QUESTION 5.4:-----Description: Get the value present at -10th index Input: List = 105,205,305,405,505,605,705,805 QUESTION 6:-----QUESTION 6.1:-----Description: Remove the value present at 2nd index and print the removed value Input: List = 10,20,30,40,50,60 QUESTION 6.2:-----Description: Remove the value present at 10th index Input: List = 10,20,30,90,10,10,40 QUESTION 6.3:-----Description: Remove the last value of 10 present in the list Input: List = 10,20,30,90,10,10,40 QUESTION 6.4:-----Description: Remove the last value present in the list Input: List = 10,20,30,90,10,10,40 QUESTION 6.5:-----Description: Remove the value 80 present in the list Input: List = 10,20,30,90,10,10,40,60,80,100 QUESTION 6.6:-----Description: Remove the value 50 present in the list Input: List = 10,20,30,90,10,10,40,60,80,100 QUESTION 6.7:-----Description: delete the value present in (5th to -1st) index in the list Input: List = 10,20,30,90,10,10,40,60,80,100 QUESTION 6.8:-----Description: delete the value present in (2nd to last) index in the list Input: List = 10,20,30,90,10,10,40,60,80,100 QUESTION 6.9:-----Description: clear all the value present in the list Input: List = 10,20,30,90,10,10,40,60,80,100 QUESTION 7:-----QUESTION 7.1:-----Description: Replace the value 300 into 350 in the list Input: List = 100,200,300,400,500,600,700 QUESTION 7.2:-----Description: Replace the value present in 7th index as 90 Input: List = 10,20,30,90,10,10,40,50,100,200,300 QUESTION 7.3:-----Description: Replace the 10 into 100 in list Input: List = 10,20,30,90,10,10,40,50,30 Output: List = 100,20,30,90,100,100,40,50,30 QUESTION 8:-----QUESTION 8.1:-----Description: Add a value 50 in the 2nd index and display the list after adding. It gives a solitary point of interaction that allows you to compose test scripts in Python. • No establishment Required - Selenium doesn't need server establishment; test scripts collaborate straightforwardly with the program. What is Selenium? • More prominent and carried out - Selenium orders are sorted into various classes, making them more precise and executed. • Upholds Multiple Programming Languages - C#, Java, Python, PHP, Ruby, Perl, and JavaScript • Upholds Multiple Operating Systems - Android, iOS, Windows, Linux, Mac, Solaris. • Open Source and Portable - Selenium is an open-source and compact Web testing Framework. Testers can write easy and dynamic test cases APIs, user interfaces, databases, and more. The open-source tool that automates web browsers is Selenium, and it enhances more with Python. Input : List = 10,20,30,90,10,10,40,50 QUESTION 8.2:-----Description: Add a value 70 at the end of the list Input: List = 10,20,30,90,10,10,40,50 QUESTION 8.3:-----Description: Add a value 80 at the 30th index of list Input: List = 10,20,30,90,10,10,40,50 QUESTION 8.4:-----Description: Add a value 100 at the last index of 10 in the list Input: List = 10,20,30,90,10,10,40,50 QUESTION 9:-----QUESTION 9.1:-----Description: Add a value 100,200,300 at the last position of list Input: List = 10,20,30,90,10,10,40,50 QUESTION 9.2:-----Description: Add a value [100,200,300] at the last position of list Input: List = 10,20,30,90,10,10,40,50,100,200,300 QUESTION 10:-----Description: Add a value [100,200,300] at the last position of list Input: List = 10,20,30,90,10,10,40,50,100,200,300 QUESTION 10:-----QUESTION 10.1:-----Description: count the 10 value present in the list Input: List = 10,20,30,90,10,10,40,50 QUESTION 10.2:-----Description: find the maximum value in the list Input: List = 10,20,30,90,10,10,40,50 QUESTION 10.3:-----Description: find the maximum value in the list Input: List = 'java','python','selenium','Java','Python','Selenium' QUESTION 10.4:-----Description: find the minimum value in the list Input: List = 10,20,30,90,10,10,40,50 QUESTION 10.5:-----Description: find the minimum value in the list Input: List = 'java','python','selenium','Java','Python','Selenium' QUESTION 11:-----QUESTION 11.1:-----Description: Reverse the values present in list Input: List = 10,20,30,50,90,40,100,60,10,70 QUESTION 11.2:-----Description: Sort the values (Ascending & Descending) order present in list Input: List = 10,20,30,50,90,40,100,60,10,70 QUESTION 12:-----QUESTION 12.1:-----Description: Copy the values in list Input: List = 10,20,30,90,10,10,40,50 QUESTION 12.2:-----Description: Create a lists with values and compare the two list Input: List = 10,20,30,90,10,10,40,50 Input: List = 30,40,50,60,80 QUESTION 12.3:-----Description: Create a lists with values and compare the two list Input: List = 10,20,30,90,10,10,40,50 Input: List = 10,20,30,90,10,10,40,50 QUESTION 13:-----QUESTION 13.1:-----Description: Get the each value of list by using for loop Input: List = 105,205,305,405,505,605,705,805 QUESTION 13.2:-----Description: Get the each value of list by using Enumerate for loop Input: List = 105,205,305,405,505,605,705,805 QUESTION 13.3:-----Description: Get the each value of list by using Enumerate for loop and print only odd index value Input: List = 105,205,305,405,505,605,705,805 This command-line tool automatically identifies tests you have written, runs them, and displays the outcome. • Lesser assets required - Selenium requires fewer assets compared to its rivals like UFT, RFT, etc. Something went wrong. What is Pytest used for? • Upholds Multiple Browsers - Google Chrome, Mozilla Firefox, Internet Explorer, Edge, Opera, Safari, and so on • Equal Test Execution - It additionally upholds equal test execution, which diminishes the time and builds the proficiency of tests. Day 7:-----List QUESTIONS(Theory)-----1.What is list?2.How to remove the values from list?3.What is the difference between append() and extend()?4.How to find the length of list?5.What are the methods present in list?6.Is Negative indexing in list possible or not?7.How to delete or remove elements from a list?8.How to change or add elements to a list?9.How to slice lists in Python?10.How to access elements from a list?11.What is difference between pop() and delete()?12.What are ways used for removing all values from list?13.What is the difference between sort() and Sorted()?14.Write a program to sort values in descending order?15.Is possible to check whether value is present or not? Wait a moment and try again. • A mix of hardware and DSL - Selenium is a mix of instruments and DSL (Domain Specific Language) to do different tests. Selenium is an integral asset for controlling web browsers through projects and performing program mechanization, and it is helpful for all programs to chip away at all significant OS. • Shorten test execution time - Selenium upholds equal test execution, which lessens the time taken to execute equal tests.

21.04.2020 - CSV file is a Comma Separated Value file that uses a comma to separate values. CSV file is a useful thing in today's world when we are talking about machine learning, data handling, and data visualization. In this article, we will discuss how to ... 18.04.2019 - a string = "Python is the world's best programming language." print(a\_string) Output: Python is the world's best programming language. But what if a string is having both single and double quotes? The following is the way to handle it. 4. Handle Both Single and Double Quotes in a String in Python. a Using Backslash (\) 30.04.2022 - 10 Code Coverage Tools for Java, Python, C, C++, C#, .NET - 15 Best Code Review Tools for Code Quality Analysis (May 2022) 14 BEST Algorithm & Data Structures Books (2022 List) 22 BEST Music Streaming Service (Free & Paid Music Sites) in 2022; 15 Best Soundcloud Downloader | Soundcloud to MP3 Converter 04.05.2022 - [Image source]. Inkscape is an open-source vector graphics editor, very much like Corel Draw, Xara X, Adobe Illustrator, etc.It is, so far, one of the best open-source PDF editors we have come across. You can use Inkscape to view and edit your PDF. The structure of Arduino Pro Micro is similar to the Arduino Mini board, except the Microcontroller ATmega32U4. The board consists of 12 digital Input/output pins, 5 PWM (Pulse Width Modulation) pins, Tx and Rx serial connections, and 10-bit ADC (Analog to Digital Converter). List of available boards in Arduino software Model binding is a process in which we bind a model to controller and view. It is a simple way to map posted form values to a .NET Framework type and pass the type to an action method as a parameter. It acts as a converter because it can convert HTTP requests into objects that are passed to an action method. Example 28.03.2022 - This video downloader chrome extension automatically searches for TV series and movies online for subtitles when you download any video. Features: This is one of the best free video downloaders that allows you to download Videos From 10,000+ Sites
